(I) and (II) are used in methods of the invention stimulating proliferation of mesenchymal cells, detecting the presence of zFGFI1 in a biological sample, detecting the presence of FGFRIIC in a biological sample and sample, detecting the presence of FGFRIIC in a biological sample and citizenting the presence of FGFRIIC in a biological sample and polypeptides, nucleic acid and/or antibodies of the invention may be used in treatment of disorders associated with diabetes mellitus, neural cell development or degeneration, amyotrophic lateral sclerosis, cerebrovascular stroke, neuropathy associated with lack of maintenance of neuronal differentiation, amyotrophal disorders of the nervous system or lack of neuronal development. Wolecules of the invention may also be useful for improving cardiac function and for promoting wound healing of the epidermis. The present sequence represents the amino acid sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             28. .208 // Anotes "Mature fibroblast growth factor homologue, zFGFI1. This sequence is specifically claimed in claim 4"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  fibroblast growth factor; FGF; zFGF11; mesenchymal cell; FGFRIIIc;

```
The present invention relates to new extracellular messenger polypeptides and polymucleotides encoding them. XMBS is useful in the diagnosis, treatment and prevention of neurological disorders (e.g. epilepsy, stroke, or Alzheimer's disease), autoimmune/inflammatory disorders (e.g. acquired immune deficiency syndrome, AIDS, Addison's disease, or allergies), developmental disorders (e.g. renal tubular acidosis, anaemia or Cushing's syndrome), endocrine disorders (e.g. hypophysectomy, aneurysm or vascular malformation), and cell proliferative disorders
                                                                                140
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; extracellular messenger; neurological disorder; epilepsy; XMES-3; Alzheimer's disease; autoimmune disorder; renal tubular acidosis; stroke; acquired immune deficiency syndrome; AlDS, Addison's disease; cytostatic; developmental disorder; anaemia; Cushing's syndrome; endocrine disorder; vascular malformation; cell proliferative disorder; gene therapy; cancer; hyporthropidism; phypothyroidism; antihelminthic; hyperthyroidism; gonadal steroid hormone; pancreatic disorder; nootropic; diabetes mellitus; immunosuppressive; anti-inflammatory; antibacterial; antiviral; antifungal; parasitic; protozoal; allergy.

anti-PRO antibody; diagnostic assay; gene expression; tumour; cytostatic.
                                                                                                                                                                                                                                                       81
                                                                                                                                                                                                                                                                                     80
(e.g. cancer), and in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of extracellular messengers. XMES may also be used in the treatment of viral, bacterial, fungal, parasitic, protozoal and helminthic infections, trauma, disorders associated with hypopituitarism, hypothyroidism, hypothyroidism or gonadal steroid hormones, and pancreatic disorders such as type I or type II diabetes mellitus. The XMES may be used for somatic or germline gene therapy. The present sequence is human XMES-3 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ¥;

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynucleotides are useful for preparing a medicament useful in the diagnosis and treatment of tumours. Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABUS0739-ABUS0800 represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the

```
The invention describes an isolated mucleic acid molecule comprising a sequence with at least 80% identity to: (a) a nucleotide encoding any of 122 PRO (secreted and transmembrane) polygeptides whose sequences are fully defined in the specification; or (b) any of 122 mucleotide comprises are sequences having e.g. 4834, 2504 or 1759 bp fully defined in the specification; or the full length coding sequence of any these 122 mucleotide sequences. The PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostics, blosensors or bloreactors. These are comparant tumour, breast tumour, prostate tumour, rectal tumour, colon tumour, breast tumour, prostate tumour, rectal tumour, or liver tumour) or stimulating the proliferation or differentiation of chondrocyte cells, for stimulating proliferation or differentiation of chondrocyte cells, for stimulating proliferation or differentiation of chondrocyte cells, for stimulating proliferation or differentiation of chondrocyte cells, so also useful for treating tumours or various bone and/or cortilage disorders (e.g. sports injures or arthritis), or wounds. The PRO polypeptides are useful in drug screening, particularly as targets for therapeutic intervention in these diseases, and in the diagnostic cells ouseful as molecular weight markers, or for chromosome also useful as molecular weight markers, or for chromosome calso useful in gene therapy, particularly for replacing a defective cells on the anion acid sequence of a novel human secreted and transmembrane PRO polypeptide conductors and anion acid sequence of a novel human secreted and transmembrane PRO polypeptide conductors and an open therapy, particularly for replacing and additive conductors and anion acid sequence of a novel human secreted and conductors and anion acid sequence of a novel human secreted and conductors.
                                                      or stimulating Tumor Necrosis Factor alpha, or chondrocyte or proliferation, especially for treating lung tumors, arthritis or
New genes, and its encoded secreted and transmembrane polypeptides,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes one hundred and eighty seven nucleic acids encoding novel human secreted and transmembrane (PRO) polypeptides. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating or diagnosing a cardiacyascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, agerelated macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphagitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          81
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     80

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- CATALYTIC ACTIVITY: Diphosphate + H(2)O = 2 phosphate.
-!- COFACTOR: Magnesium (By similarity).
-!- SUBUNIT: Homodimer (Potential).
-!- SUBCELLULAR LOCATION: Integral membrane protein (Probable).
-!- SIMILARITY: Belongs to the H(+)-translocating pyrophosphatase (TC 3.A.10) family. Subfamily 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HAMAÞ; MF_01130; -; 1. interpretar interpretar interpretar i TRO004131; H PPase.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Coat protein VP1 - porcine parvovirus

N.Contains: coat protein VP2

C.Specials: porcine parvovirus

C.Saccesion: B3302

R.Ranz, A.I.; Manchus, J.J.; Diaz-Aroca, E.; Casal, J.I.

J. Gen. Virol. 70, 2541-2553, 1989

A.Title: Porcine parvovirus: DNA sequence and genome organization.

A.Reference number: A33302; MUID: 90010964; PMID: 2794971

A.Accession: B33302

A.Molecule type: DNA

A.Accession: B3302

C.Genetics: C.Superfamily: parvovirus coat protein

C.Superfamily: parvovirus coat protein

F:145-723/Product: coat protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            coat protein VP1 - porcine parvovirus (strain 90HS)

A31401

Macrobage colony-stimulating factor precursor - mouse
NyAlternate names olony-stimulating factor 1; M-CSF
C;Species: Mus macrolus (house mouse)
C;Species: Mus macrolus (house mouse)
C;Accession: A31401; JN0294; Ā26575; A23166; A25883
C;Accession: A31401; JN0294; Ā26575; A23166; A25883

"Evidence for lateral gene transfer between Archaea and Bacteria from genome sequence of Thermotoga maritima.";

I Nature 399.323-329(1999)

C -1- SIMILARITY: Belongs to the fucckinase / gluconokinase /

Glycerokinase / xylulokinase family.
